Some cacti bloom most of the year, while others only bloom when the days are short. Some of the flowers open when the sun is down, while others open up in the bright of day. No matter which type of bloom your cactus produces, it is sure to be a delight. These cacti have an unusual longevity. In fact, some can live for up to 200 years. If you take care of these easy-going plants, they can last a lifetime. Fun fact: these cacti have been part of a human diet for thousands of years. Columnar cacti are amazing. Non-flowering cacti are particularly easy to care for, as well. Since you don't have to worry about getting the flower to bloom, care is simple as can be. The spines hold water for long periods of time so that you can go a while without water. The prices on these plants range from under five dollars to over 20 dollars. Of course, the exact amount depends on the size and age of the plant, the retailer, and more. When many people picture a cactus, they see that iconic barrel cactus with two limbs. While those are a common breed of cactus, the cactus family of plants is much more varied than that. Columnar type cacti, also known as "cereus type," grow tall and skinny. There are approximately 170 species of columnar cacti, each of which has unique features. The one unifying element is that these cacti are taller than they are wide. In fact, some types can be ten times as tall as they are wide. Barrel (or globular) cacti look like, well, a barrel. These plants can grow up to three feet tall, but some varieties stay smaller than that. Typically, a fully-grown barrel cactus costs between 20 and 40 dollars. However, you can often find young cacti for only a few dollars. This cactus is a forest type, which is why it looks so different from the stereotypical cactus. The blooms can be orange, pink, red, or white, depending on the plant. Unlike other cacti, this plant like a little humidity. If you live in a dry area, be sure to add a little moisture to your home for this cactus. You can do this by putting the plant on a water-filled saucer. When people consider flowering plant varieties for their gardens, cacti are rarely the first plant to come to mind. However, many types of cacti can produce vibrant and enchanting flowers that smell incredible. Our cactus nursery has been a family-owned company for over 40 years. Visit Bach's Greenhouse Cactus Nursery in Tucson, Arizona. Have you decided to add a cactus to your collection? You can find great options at these retailers: In Mexico, you can find cacti in many different heights, shapes, colors, and sizes. Here are a few of the most popular Mexican plants to bring home: Search for hundreds of cacti and learn key information about each including photos, sun needs, water needs, hardiness zones, soil pH and so much more. Your ultimate cacti guide. The third basic shape of outdoor cacti is the prickly pear or Opuntia genus. Rather than one of two columns or barrels, these plants have plenty of flat, fleshy surfaces that look like giant leaves. Most of these cacti create beautiful flowers of orange, pink, purple, and red. The "leaves" also range in color from bright green to subdued blue. Some of the many unusual cacti and succulent from Madagascar include: In the Southwest part of the United States, cacti are abundant. In fact, Arizona's Saguaro National Park is named for the "King of the Cactus," or the Saguaro cactus. This towering plant can grow over 60 feet tall and has several smaller branches coming off one giant column. If you are looking for something unique each Christmas, this unusual plant can give you what you need. The Christmas Cactus is named so because it blooms near the Christmas season when the days are much shorter. With proper care, this cactus can also bloom in the fall and spring. Each of these cacti likes dry soil and plenty of sunshine. If you live in a place where you get cold weather or wet soil, you may wish to plant your outdoor cacti in pots. This way, you can move the plants inside when conditions get harsh for them. You can expect to pay between 10 and 30 dollars for one of these plants. However, very mature cacti can cost a bit more. A few of these can add great depth and texture to your outdoor garden. A plant like this will typically set you back only 15 to 25 dollars. They make exciting additions to any yard! Each listing includes an image and key growing information below in a table. Ordered A to Z by default. Not all cacti types produce flowers. However, the lack of blooms does not mean it lacks beauty. You can find non-flowering cacti of all shades, with golden spikes, and in plenty of shapes. Each plant is unique and adds flavor to your garden or home. Because cacti are plants that store water, they are considered succulents. The water is stored in the fleshy part of cacti, something that is a defining feature of succulents in general. Because of this, cacti are actually considered a sub-category under the umbrella of succulents. This does not mean that all succulents are cacti, though. Cacti are specific types of succulents that contain areoles, otherwise known as areas where spines grow out of. These are aspects of cacti that don't appear in other succulents,

making them unique in this way. Do you think that cacti are only for boring, dry yards? Think again. These trendy plants make great additions to any yard. Not only do they add a fresh, unique look, but they are also easy to care for. Angiosperms is another way of referring to flowering plants, a category that cacti are a part of. The Cactaceae family is included under the category of angiosperms, putting cacti under this category as well. The plant itself costs between five and 15 dollars. You can buy it already potted from 35 dollars and up. It is best to buy a Christmas Cactus that already has flowers. Mexico is home to some of the most recognizable cacti in the world. In fact, the cactus has become integral to Mexican society and cuisine. The Organ Pipe cactus produces a sweet fruit that local wildlife relies on. Meanwhile, the local prickly pear varieties make a refreshing ingredient for any Mexican dish. Cacti are considered plants due to their status as succulents, a sub-category of plants. Just as they differ in size, the American plants have a wide range of prices. Certain one-gallon plants can cost less than ten dollars while other ten-gallon cacti can set you back 70 dollars. It depends on how much you're willing to spend and how large you want the plant to be when you get it. As with indoor cacti, you have few limits when it comes to outdoor cactus types. These types can be grouped into the different shapes in which they come. For a genuinely alluring landscape, you can combine each of these styles. Search for hundreds of cacti and learn key information about each including photos, sun needs, water needs, hardiness zones, soil pH and so much more. Your ultimate cacti guide. No, they are not. This is because angiosperms are often considered dicots, flowering plants that have two seed leaves. 80 Most Popular Types of Flowers (Photos and Details). In Mexico, you can find cacti in many different heights, shapes, colors, and sizes. Here are a few of the most popular Mexican plants to bring home: Columnar type cacti, also known as "cereus type," grow tall and skinny. There are approximately 170 species of columnar cacti, each of which has unique features. The one unifying element is that these cacti are taller than they are wide. In fact, some types can be ten times as tall as they are wide. Barrel (or globular) cacti look like, well, a barrel. These plants can grow up to three feet tall, but some varieties stay smaller than that. Typically, a fully-grown barrel cactus costs between 20 and 40 dollars. However, you can often find young cacti for only a few dollars. These cacti have an unusual longevity. In fact, some can live for up to 200 years. If you take care of these easy-going plants, they can last a lifetime. Fun fact: these cacti have been part of a human diet for thousands of years. Columnar cacti are amazing. While many people associate cacti with the American southwest, these plants grow all over the world. If you are hoping to create a garden inspired by a certain part of the world, check out the types of cacti that come from around the world. There are plenty of sizes of prickly pear cacti. Some smaller species can grow to less than a foot in height, while others can top seven feet. Adding these unique plants to your garden can complement your columnar and barrel cacti. 8602 N Thornydale Rd, Tucson, AZ 85742 Phone: 520-744-3333. More than 11 acres of cacti We have beautiful green houses to look through and enjoy We offer wholesale and retail. There are many desert cacti that make great houseplants. In fact, there are hundreds of individual species. You can choose an indoor desert plant by deciding on the look you like if you want it to flower and its origins. The size and price of a flowering cactus depend on the size, maturity, and breed of the plant. You can get a pack of the cacti in the picture above for just 15 dollars. As you may be able to guess from the name, the Easter Cactus is a cousin to the Christmas Cactus. This beautiful houseplant is also a forest type. However, this kind of plant is native to drier forests than its Christmas cousin. The blooms on the Easter Cactus can be red, white, peach, orange, and even lavender. Most cacti are not considered flowers, but certain species are known to have flowers growing out from them. For example, types of cacti such as the Echinopsis end up producing flowers that are quite beautiful, leading many to believe that cacti themselves are flowers. However, because cacti only are host to flowers, they are still considered plants. There are also a lot of cacti that don't have any flowers, only growing spines, making this a problematic term to apply in a general sense. It's worth noting, though, that cacti are often considered flowering plants, a term that is different than flowers themselves. There are other types, such as prickly pear cacti, that refer to a family of cacti rather than an individual plant. But for the purposes of this list it makes sense to list individual plants and cacti species. Friendly and knowledgeable staff Family-owned, which means personalized customer service. When people consider flowering plant varieties for their gardens, cacti are rarely the first plant to come to mind. However, many types of cacti can produce vibrant and enchanting flowers that smell incredible. No, but they have many aspects that mimic trees. Though there are some cacti that heavily resemble certain types of trees such as the Pereskia genus, cacti are not often considered to be trees. Many of the types of cacti that closely resemble trees are only referred to as treelike. The features that are often confused with defining them as trees are their leaves, bark and potential to grow into treelike shapes. However, to assume that a cacti is a tree because it looks like one is incorrect. Cacti are still considered part of the Cactaceae and are not considered trees by scientists. Special Characteristics: Container, Tolerates Drought, Easy to grow. As with indoor cacti, you have few limits when it comes to outdoor cactus types. These types can be grouped into the different shapes in which they come. For a genuinely alluring landscape, you can combine each of these styles. Pinterest is no longer supported on this browser (iEMobile 9) Please download a modern browser:. Whether you choose a Mexican cactus for style or sustenance, it is sure to impress. These plants enjoy dry, hot temperatures. That's why it's essential to plant any outdoor Mexican cacti in pots. You will want to bring them in if your temperatures fall too low. There are plenty of sizes of prickly pear cacti. Some smaller species can grow to less than a foot in height, while others can top seven feet. Adding these unique plants to your garden can complement your columnar and barrel cacti. You can expect to pay between 10 and 30 dollars for one of these plants. However, very mature cacti can cost a bit more. A few of these can add great depth and texture to your outdoor garden..
